PROJECT TITLE	Web Phishing Detection
MAXIMUM MARK	2 Marks

Problem Statement (PS):	Phishing is a type of fraud in which the perpetrator sends emails or uses other communication channels to pose as a trustworthy entity or person in an effort to get sensitive information, such as login passwords or account information. in order to detect this kind of fraud activity we need a solution
I am (USER)	A user, who frequently use E-cart sites for shopping and other E-payment platforms for money transactions
I'm trying to	Access a E-cart site I got through mail with a 50% off on a product I have been checking on others E-cart sites to buy
But	I am not sure if I should access that site for shopping
Because	It might be a fake web phishing site trying to scam me
Which makes me feel	Frustrated and Unsecured to do online shopping and payments
